

ROLES AND RESPONSIBILITIES

TECHNICAL LEAD

REVISION HISTORY

Revision No./Version No.	Date	Prepared by	Approved by	Details of Change
1.0	30/07/2021	Prachi Naik (Asst. Manager IT)	Anant Sham Yende (CTO)	
2.0	24/07/2024	Prachi Naik (Asst. Manager IT)	Anant Sham Yende (CTO)	Under responsibilities addition of tasks which are followed during new project execution. Updation in essential training.

PROFILE DETAILS

DESIGNATION - SE/SD/SSD

DEPARTMENT / VERTICAL -

REPORTING AUTHORITY - System Architect

Software/Coding

ROLE: Technical Lead.

MINIMUM QUALIFICATION - M.C.A / B.E / B.Tech / M.E / M.Tech in
Computer Science / Computer Engineering / Information
Technology

MINIMUM EXPERIENCE - 5 Years

JOB OBJECTIVES

To technically lead a project team with focus to get the project done within the allotted time frame and quality assurance by coordinating between verticals leads to deliver quality project in set timelines/project requirements.

RESPONSIBILITIES

1. Lead a project development technically and ensure quality is not compromised.
2. Co-ordinate and control teams (coding or other verticals) to ensure there are no delays or

ROLES AND RESPONSIBILITIES

TECHNICAL LEAD

communication gaps.

3. To go through and understand the SOP of "New Project Execution" and ensure the same is followed.
4. In case a project is being developed by external agency ensure to understand the SOP of "Guidelines for software development through Empaneled Agency" and follow the same.
5. Attend the sensitization meet as scheduled by PM & BA along with the team members and other vertical leads who will be involved in the development.
6. Understand complete scope and take clarity on the project with all the documents including FRS prepared by BA , order from client, relevant acts and rules and all documents related to the project
7. Seek confirmations and clarity on the queries raised during sensitization by all vertical leads.
8. Prepare detailed project plan & estimate the resource requirement.
9. Get the project plan approved from System Architect.
10. Get the required resources from the Technical Resource manager for initiating.
11. Start with preparation of Technical Solution document along with the team and other vertical leads.
12. Get the technical solution approved from Solution Architect.
13. Make changes in the system design wherever necessary by taking confirmation and approval from System Architect & PM.
14. Conduct project kick off as per defined SOP, share & explain project plan and technical solution defined with other vertical leads & team members involved.
15. Creation of tickets in GELJIRA in accordance with the GELJIRA ticket creation SOP.
16. Ensuring the tickets created by team members are correct with proper data towards due date, estimation efforts, description etc.
17. Ensuring the development in on track and monitoring the team's work.
18. Ensuring stand-ups meets are taken in timely manner & same are being logged.
19. During project development and initial 1 month of implementation take daily (or max every alternate day) review of progress of project and after one month at-least once a week.
 - a) Review progress of each engineer in line with Project Plan.
 - b) Identify issues if any and resolve (escalation in case no solution is found or issue is causing delay of any manner) including delay in time & more effort required.
 - c) Ensure every review is minuted and minutes are sent to all vertical leads.

ROLES AND RESPONSIBILITIES

TECHNICAL LEAD

- d) Review RTM progress by ensuring all updates in RTM are done by respective team and other vertical team also
- e) Resolve any co-ordination issues between vertical leads.
- f) Ensure vertical leads are booking efforts and work done towards respective project in GEL JIRA.
- 20. In case of unavoidable delays due to change request rework the project deliverable plan in consultation with PM & System Architect.
- 21. In case of additional priority task rework the project task prioritization in consultation with PM & System Architect.
- 22. Ensuring non availability of staff doesn't hamper project health. Always have a alternate arrangement done to handle the project operation smoothly.
- 23. TL to ensure the testing scenarios submitted by the testing team are checked by the developer (this will be referred as Unit testing) before the code is moved to testing environment.
- 24. Unit testing confirmation checklist should be attached with the testing request ticket and then marked to test lead for testing.
- 25. Ensuring communicating to your PM in case any other PM pull you for some urgent task deliverable.
- 26. In case of any changes which are minor and testing is not needed TL to ensure the same as self-tested and pushed to live.
- 27. Whenever time estimations are asked by PM towards any task ensure proper time estimations are given and incase of any issues faced request for help of System Architect.
- 28. In case any production issues received ensure the issue is analyzed and fixture of its root cause is done by the team. Ensure Production Issue Root Cause Fixture tickets are created towards such by engineer.
- 29. Ensure all changes affected are in sync with RTM.
- 30. Carry out proper impact assessment analysis for the change requests and share with the vertical lead for implementation.
- 31. Ensure testing clearance is received towards the development/ change request. Take confirmation from PM before moving the software/change to production.
- 32. Ensure proper code merging in GITLAB and maintain versioning.
- 33. During third party security audit, ensuring all vulnerabilities are fixed by coordinating with
