

ROLES AND RESPONSIBILITIES

Database Administrator - DBA

REVISION HISTORY

Revision No./Version No.	Date	Prepared by	Approved by	Details of Change
1.0	19-Aug-2024	Gayetri Tirodkar	Mayur Pedmekar (Manager IT)	

PROFILE DETAILS

DESIGNATION - SD/SSD

DEPARTMENT / VERTICAL - Software/Database

REPORTING AUTHORITY - CTO

ROLE - Database Administrator

MINIMUM QUALIFICATION - M.C.A / B.E / B.Tech /M.E / M.Tech in Computer Science
/Computer Engineering/Information Technology

MINIMUM EXPERIENCE - Min 10 Years

JOB OBJECTIVE

- A Database Administrator (DBA) plays a crucial role in managing and maintaining an organization's databases. Their responsibilities ensure that databases are secure, reliable, and perform optimally.

ROLES AND RESPONSIBILITIES

Database Administrator - DBA

RESPONSIBILITIES

- 1) Installation and setting up database management systems (DBMS) like MySQL, SQL Server, PostgreSQL, Oracle, MongoDB etc.
- 2) Configuring database settings and customizing the database environment to meet the specific needs of the organization.
- 3) Create database structures based on the organization's needs, including schemas, tables, indexes, and relationships.
- 4) Set up databases on various platforms and configure them for optimal performance.
- 5) Monitor Performance: Use tools and techniques to keep track of database performance metrics.
- 6) Ensure that database resources (CPU, memory, disk space) are allocated effectively.
- 7) Managing user accounts, roles, and permissions to control access to the database.
- 8) Implement encryption for data at rest and in transit to protect sensitive information.
- 9) Set up and maintain audit trails to track database access and changes.
- 10) Ensure that database meets industry standards and legal requirements for data protection.
- 11) Develop and implement backup strategies to ensure data is regularly backed up.
- 12) Developing and implementing disaster recovery plans to restore data in case of failures.
- 13) Design and test recovery procedures to restore data in case of failure or corruption.
- 14) Perform regular maintenance tasks such as database cleanup, indexing, and updating statistics.
- 15) Plan and execute upgrades to database systems and associated applications to leverage new features and improvements.
- 16) Diagnose and resolve database-related issues and performance problems.
- 17) Assisting developers, analysts, and end-users with database-related queries and issues.
- 18) Setting up and managing data replication to ensure data consistency across different systems.
- 19) Implement clustering, mirroring, or other technologies to ensure the database remains available during failures.
- 20) Analyze data growth trends and plan for future capacity requirements.
- 21) Ensure adequate resources are in place to handle increasing data loads.
- 22) Maintain detailed documentation of database schemas, configurations, and procedures.

ROLES AND RESPONSIBILITIES

Database Administrator - DBA

- 23) Generating reports on database usage, performance and other metrics for management and stakeholders.
- 24) Keep up with the latest database technologies, trends, and best practices.
- 25) Continuously look for ways to improve database performance, security, and efficiency.
- 26) Monitor and take necessary measures to resolve database error logs weekly basis to ensure error free DB scripts.

TRAINING REQUIREMENT

Yearly minimum 64 hours of online/in person training in areas as identified by technical team & as per yearly training calendar.
