

STANDARD OPERATING PROCEDURE

HOW TO MANAGE BACKEND REPORT REQUEST

REVISION HISTORY

Revision No./Version No.	Date	Prepared by	Approved by	Details of Change
1.0	01-July-2025	Tanvi Samant (Software Developer)	Prachi Kamat (Assistant Manager IT)	

OBJECTIVE

To ensure a standardized, efficient, and traceable process for handling backend report requests originating from various departments, thereby promoting consistency, accountability, and timely delivery of accurate data.

PARTICIPANTS

Project Manager (PM): PM on behalf of client can request for data.

Implementation Engineer(IE): Raises the report request with proper requirements.

Team Lead(TL): Reviews the request and generates report.

Engineer(s): Develops and executes the scripts to generate reports. Validates and formats the output.

INTRODUCTION

What is Backend Report Request?

A Backend Report Request is a formal request raised to the software development or maintenance team to generate a report based on data stored in the backend systems. These reports are typically requested by clients or stakeholders to fetch data with regards to their respective department/service and mainly which are not available in frontend.

PROCEDURE

1. PM should raise a GELJIRA ticket towards "Backend Data Report Request" issue type. The implementation engineer can as well raise a "Backend Data Report Request" however, the same needs to be confirmed by respective project manager by putting their comments on the ticket.
2. The request should clearly mention:
 - a. What data is needed.
 - b. Which fields are needed and in what sequence.
 - c. The constraints and conditions under which the data is to be generated.
 - d. In-case sensitive information is requested, the PM must take approval of the CEO and then raise the request.
3. The ticket to be marked to respective TL.
4. On receipt of ticket, TL should first check the request for:
 - a. Whether it includes a sample format of report requested or fields are mentioned in request. In-case format /fields are missing mark back the ticket and request proper details from PM/IE.
 - b. Any sensitive/personnel information is requested eg. aadhar/mobile no, take confirmation from PM if data has to be submitted in masked format.
5. Verify if the required data can be generated using the existing excel report module. If yes, inform the implementation engineer to use the same via comments on ticket.
6. If the requested ticket is proper mark same to developer.
7. Developer needs to write efficient, optimized SQL to avoid performance issues.
8. For large data requests—such as queries expected to return more than 10,000 rows or generate files larger than 50 MB—execute these during non-productive hours to minimize impact on server performance and live systems. The Team Lead is responsible for coordinating with the Project Manager (PM) to communicate the execution plan, timelines, and any potential delays in delivery.

- 9.Ensure the final report matches the requested format exactly. Do not include extra or irrelevant fields.
- 10.TL will review the scripts and data. TL will also review if output data does not contain NULL values of invalid content in any of the columns. If found correct share the same with PM via requested ticket.In case of discrepancy mark back to the developer.
- 11.If the report contains sensitive data then file needs to be zipped, password protected and the attached to the ticket. The password to be shared exclusively with PM and not over GELJIRA.
- 12.PM to ensure closure of the ticket once the report is received.

Note:

1. After Discussion with PM, the report can be made available in the Excel Reports Module to reduce future requests.
2. Reports with huge data request need to be managed with different mechanism allowing to download data after 15 min or more based on complexity.

STANDARD OPERATING PROCEDURE

HOW TO MANAGE BACKEND REPORT REQUEST

TIMELINE

Basic reports to be processed in 24 hours after following due procedures

Report Complexity	Low Priority [Hrs]	Medium Priority [Hrs]	High Priority [Hrs]
Low	8	4	2
Medium	16	8	4
High	24	16	8

Logging in Jira/TM

Issue Type*: Backend Report Request

Assignee*: TL

Reporter (ticket to be created by) *: PM/IE

Description: Fill in the details requested as per below

1. Same will need in future? Yes/no :
2. Report format attached ? Yes/No :
3. List of fields in report (if format not attached) :
4. Any specific conditions to draw the report to update (mention if any) :

Work Logging by*: TL/Developer

Priority*: High/Medium/Low

Note: A Backend Report Request ticket should be **closed by the IE** only after confirming that the submitted report meets the requested requirements."

Workflow for Backend Report Request
