

STANDARD OPERATING PROCEDURE

Test Automation using Testim.io tool

REVISION HISTORY

Revision No./Version No.	Date	Prepared by	Approved by	Details of Change
1.0	1-Aug-2024	Siya Chavan (Senior TestLead)	Anant Sham Yende (CTO)	Test Automation using Testim.io tool SOP.

OBJECTIVE

The objective of this SOP is to establish a standardized, efficient, and reliable process for automation testing using Testim.io. It aims to enhance test coverage, improve test accuracy, reduce manual testing efforts, and ensure the quality and stability of the application by leveraging Testim.io's capabilities for recording, editing, running, and maintaining automated tests.

SCOPE

It covers the entire process of automation testing of web application using Testim.io, including test case identification, creation, execution, maintenance, result analysis. It is intended for test automation engineers and QA teams working on web applications within the organization.

PARTICIPANTS

- Senior Test Lead:** Oversee the entire automation testing process, coordinate between team, ensure adherence to the SOP, and provide guidance and support to the QA team.
- Testers:** Responsible for creating, executing, and maintaining automated tests using Testim.io.

PREREQUISITES

- Access to Testim.io (user account and permissions).
- Access to the application environment where tests will be conducted (e.g., staging or production).
- Installation of required Testim browser extensions.
- Basic knowledge of the Testim platform and test case structure.

STANDARD OPERATING PROCEDURE

Test Automation using Testim.io tool

PROCEDURE

1. PREPARATION

Account and Environment Setup: Ensure you have a Testim.io account and necessary permissions. Set up the test environments (e.g., staging, development)

2. TEST CASE IDENTIFICATION AND PRIORITIZATION

- **Selection:** Identify test cases suitable for automation.
- **Prioritization:** Focus on high-impact and repetitive test cases.

3. CREATING AND EXECUTING TESTS IN TESTIM.IO

3.a. Login to Testim.io:

- Open your browser and navigate to [Testim.io](https://testim.io).
- Login using your credentials.

3.b. Project Setup:

- Create a new project or select an existing project.
- Configure project settings, such as test environments and integrations.

3.c. Creating a New Test:

- Click on the "Create a New Test" button.
- Define the test name and description.
- Record the test steps by interacting with the application under test.
- Use the Testim recorder to capture actions such as clicks, inputs, and navigation.

3.d. Editing and Enhancing Tests:

- Use the visual editor to add, modify, or delete steps.
- Insert validation points to verify expected outcomes.
- Utilize custom JavaScript for complex logic.

3.e. Parameterization :

- Parameterize tests to handle multiple data sets.
- Define variables and replace hard-coded values with these variables.

3.f. Adding Assertions:

- Add assertions to check if the application is behaving as expected.
- Use built-in assertions or create custom assertions as needed.

STANDARD OPERATING PROCEDURE

Test Automation using Testim.io tool

3.g. Running Test

- Scheduling Tests: Schedule tests to run at specific times or after deployments
- Running Tests Manually: Run tests manually when needed from the Testim dashboard.

ANALYZING RESULTS

- **Debugging Failures:** Analyze failures using screenshots, logs, and video recordings.
- **Logging Defects:** Log defects as 'Testing Bug Issue' in GELJIRA as Sub Tasks towards the corresponding Testing Ticket.
